# Product Data Sheet

## TackCoat Intercoat Bonding Enhancer

**Product Description - PolyVers TackCoat** is a brush or spray applied product for “waking up” existing polyurea, plastics or synthetic rubber material to accept a new coat of polyurea. Especially useful for the tie-in coat on extended or delayed jobs. Simply apply to surface of existing polyurea or plastic and allow to flash off. Top coat with next layer of polyurea within 1 hour. Eliminates hand sanding or use of flammable solvents.

**Uses -** Bonding old Polyurea, plastics or synthetic rubber material to new polyurea.

### Advantages -

- Does not use aromatic halogenated or non-halogenated solvents to bond old polyurea to new polyurea.

### Physical Properties -

Color	clear
Specific Gravity @ 25° C	.92 @ 77°F
Boiling Point	243°F
Odor	Amine odor

**Mixing - TackCoat** is a single component product.

**Shelf Life -** One year, in original unopened factory containers under normal storage conditions of 55°F to 95°F.

**Safety -** Do not breathe vapors. Use appropriate respirator with green band cartridge to protect against MDI vapor. Avoid contact with skin and wear protective gloves. Read Material Safety Data Sheet before using. Seal container tightly after use to prevent introduction of moisture laden air.

**Application Recommendations –** Apply at an approximate spread rate of 200 to 700 square feet per gallon by brush or spray, making the existing coating tacky. Ponding on the surface is to be avoided. Small areas may be wiped down with a clean cotton rag. If the surface is not tacky at the time of over coating or the 1 hour window has passed, a re-application is necessary. **TackCoat** must flash off prior to over coating.
